Cocking pull ring code 76-098

Striker code 76-088

Striker spring code 76-089

Striker retainer code 76-090

Silencer O ring small body code 76-091

Silencer O ring large body code 76-092

Holder block small body code 76-093

Holder block small body code 76-094

Block alignment pin code 76-095

Fixing screw small body code 76-096

Fixing screw large body code 76-097

Firing pin ring code 76-0072

**This device is designed and manufactured solely to test the function of primed cartridge cases and should not be used to test any other form of ammunition or ammunition components**

## USER INSTRUCTIONS

1. Secure the Primer Testing Device firmly, pointing in a safe direction.
2. Wear suitable eye and ear protection.
3. Remove powder from “blanks” before firing.
4. Insert safety pin in firing pin striker.
5. Insert firing pin ring in selected “power hole”.
6. Ensure device is pointing in a safe direction.
7. Place primed case in appropriate sleeve.
8. Insert sleeve in brass body and screw into firing device.
9. Place ‘silencer’ in position.
10. Alert any person within earshot with command “firing”.
11. Remove safety pin.
12. Remove firing pin ring to “fire” the primer tester.

## DO NOT

1. Do not hold the silencer tube when firing.
2. Do not fire CS blanks in the primer testing device.
3. Do not attempt to fire anything other than a primed case in the primer firing device.

## Notes:

1. The body holder can be removed to allow the body to be clamped in a vice.
2. For “crime primer testing” always fire a lab primed case first to ensure “power hole” selection is correct, to increase firing power pull the striker to the rear, selecting a hole to give more travel/power, check mechanism is functioning properly.
3. The silencer baffle is a “scotch brite” cloth, re-new periodically.

PRICE LIST AUGUST 2018

- All prices ex works, vat extra
- Available to forensic providers only
